DETAILED ACTION

Response to Amendment

1. The response filed on 08/31/2009 has been entered. Claims 1-12 are presented for examination.

Allowable Subject Matter

1. Claims 1-12 are allowed.
2. The following is an examiner's statement of reasons for allowance: None of the cited prior art taken alone or in combination with other references, discloses, teach or fairly suggest a module that has a chip with at least two pairs of chip connection contacts and wherein the module has at least two pairs of module connecting plates wherein the two module connecting plates of each pair are provided for the electrically conductive connection with the component connection contacts of in each case one of at least two further components and wherein each module connecting plate has a plate surface with a particular shape and is designed to be electrically conductive and is connected in an electrically conductive manner with a chip connection contact and wherein the shapes of the plate surfaces of the two module connecting plates of each pair are identical, and wherein the shapes of the plate surfaces of the module connecting plates of different pairs are different, and wherein in a starting position of the module connecting plates, the shapes of the plate surfaces of the module connecting plates result in a particular plate pattern and differ such that when, starting from the starting position, all the module connecting plates are jointly rotated around an axis that

Art Unit: 2887

runs perpendicular in relation to the plate surfaces and that passes through the mid-point the same plate pattern always results after joint rotation around 180° in each case.

The best prior art of record Moll et al. (US Patent No. 7, 245, 005) discloses a chip with a single pair of chip connection contacts and wherein the module has a single pair of module connecting plate and wherein each module connecting plate has a plate surface with a particular shape and is designed to be electrically conductive and is connected in an electrically conductive manner with a chip connection contact and wherein the shapes of the plate surfaces of the two module connecting plates of each pair are identical. However, Moll fails to specifically disclose that the module has a chip with two pairs of chip connection contacts and at least two pairs of module connecting plates. These limitations in conjunction with other limitations in the claimed invention were not shown in the prior art. Accordingly one of ordinary skill in the art would not have been motivated to modify the teachings of the prior art to meet the claimed limitations.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
